

Sitecore for HP TRIM Connector

ROBUST RECORD KEEPING FOR SITECORE

Extend Sitecore with the powerful document management features of HP TRIM. Using FuseIT's secure connector ("SooT"), HP TRIM administrators can extend their document review, manipulation, and processing functionality to web users. The connector greatly increases your business efficiency and the value of your existing Sitecore and HP TRIM investments.

This bidirectional real time integration allows users to create, update, view and delete HP TRIM documents using a web browser. The connector adds record governance to Sitecore by using standard HP TRIM web services.

Document handling and auditing features include:

- HP TRIM document search and view via Sitecore web controls.
- Upload documents to HP TRIM with a Sitecore upload control.
- Update or delete HP TRIM documents from Sitecore.
- Save completed Sitecore WFFM forms to HP TRIM as PDFs.
- Save web pages or web forms to HP TRIM as PDFs.
- Add links to HP TRIM documents in Sitecore's WYSIWYG page editor.
- Save files added to the Media Library into HP TRIM.
- Synchronise HP TRIM documents into Sitecore Media Library.
- Control access with Sitecore roles or HP TRIM permissions.
- Show documents in selected HP TRIM containers in Sitecore.
- Easily extend existing functionality if required.

Sitecore for HP TRIM Connector

The connector makes HP TRIM documents available to a large number of users while enforcing security at a granular level. Document permissions are tightly controlled using HP TRIM's in-built security model coupled to the extensive security offered by Sitecore. Because the connector uses standard HP TRIM web services the same security constraints can be imposed on web users as those in HP TRIM itself.

The range of secure connection options include:

- Single Sign On with Active Directory credentials and Kerberos.
- HP TRIM credentials in the Sitecore User Profile.
- Login allowing HP TRIM access for the current session.
- Restrict page access using Sitecore roles.
- Generic TRIM access using stored credentials.

Uploading documents to HP TRIM is easy. Information, images and video files can be uploaded, using one of the included Sitecore web controls, directly to HP TRIM using a browser or mobile device. If your needs are complex, the connector's open architecture makes it easy to extend the functionality provided. For instance, T4S could be used to expose selected HP TRIM files to external file handling systems.

FuseIT's complimentary deployment assistance, from experts in both technologies, ensures a fast and smooth implementation. Upgrades and enhancements to the connector are available with FuseIT's standard maintenance and support plan.

The Sitecore for HP TRIM connector is a FuseIT core product supported by a development team with deep experience with Sitecore, HP TRIM and Salesforce.com.
